SUMMARY

Backend-focused full-stack developer (3rd-year B.Tech ECE, CSJMU) building REST APIs, scalable backend systems, and AI-integrated services. Shipped projects spanning caching-optimized backends, sandboxed code execution, and offline mesh networks.

EXPERIENCE

Irafactory Media Agency

Junior Web Developer (Intern)

Bengaluru, India (Remote)

Jun. 2026 – Present

- Integrate REST APIs for dynamic content and form-submission flows, structuring validated JSON payloads and handling network timeouts and 4xx/5xx errors with graceful fallback states.
- Define content schemas in a headless CMS and manage environment configuration and API keys across staging/production deployments.

PROJECTS

CodeTrack++ (Full-Stack Coding Platform) | [GitHub](#) | [Live](#)

Jun. 2026

- Tech Stack:** React.js, Node.js, Express, PostgreSQL, Redis, Monaco Editor
- Built a browser IDE (Monaco Editor) with JWT auth and a sandboxed Node.js `child_process` engine to safely execute untrusted JS/C++ submissions.
- Added a Redis Sorted Sets caching layer for the leaderboard, cutting PostgreSQL query time from ~320ms to <50ms (~85% reduction) in local load tests.

EchoChat (Offline SOS Mesh Network) | [GitHub](#) | *Team (3)*

Jan. 2026

- Tech Stack:** Android (Kotlin), Bluetooth LE, Wi-Fi Direct, libsodium
- Co-built a 100% offline Android SOS mesh network using a custom min-heap-based priority queue for triage (Levels 1–5), guaranteeing zero-latency delivery for critical alerts.
- Implemented AODV, a graph-based routing algorithm, from scratch in Kotlin over Bluetooth LE/Wi-Fi Direct — with RSSI-based next-hop selection, TTL-bounded loop prevention, and libsodium end-to-end encryption.

Multimodal Product Inconsistency Detector | [GitHub](#) | [Live](#)

May 2026

- Tech Stack:** Python, CLIP (ViT-B/32), PyTorch, Streamlit, Scikit-learn
- Built an AI catalog-auditing tool that uses CLIP's dual-encoder to detect image-title mismatches in e-commerce listings via a shared 512-d embedding space.
- Tuned cosine-similarity thresholds via grid search for zero-miss auditing, reaching ~78% accuracy and 0.76 ROC-AUC on a 500-sample test set; deployed as a live Streamlit app.

TECHNICAL SKILLS

Backend & APIs: Node.js, Express.js, REST APIs, JWT Authentication

Databases & Caching: PostgreSQL, MySQL, Redis, Supabase

AI / ML: PyTorch, CLIP (ViT-B/32), Scikit-learn, Gemini API

Frontend: React.js, HTML/CSS, Tailwind CSS, Streamlit

Languages: C++, Python, JavaScript, TypeScript, Java, SQL

Tools & Platform: Git, GitHub, Vercel, Netlify, Postman, Linux

EDUCATION

Chhatrapati Shahu Ji Maharaj University

B.Tech in Electronics and Communication Engineering | CGPA: 6.84/10

Kanpur, UP

Aug. 2024 – Expected May 2028

HACKATHONS & ACHIEVEMENTS

- Hackathons:** Team & Pitch Lead behind a Top 3 placement (out of 50+ teams) at HackShodh; 3rd place at The Responsive Rumble UI/UX Challenge; Semifinalist at Smart India Hackathon (SIH), clearing the university-level round.
- Open Source & Exhibitions:** Active GSSoC 2026 contributor; showcased an AI waste-classification project at Bharati Vidyapeeth AI Solution Expo
- DSA:** Solved 200+ DSA problems, primarily on LeetCode and Codeforces, using C++.
